Wrap-up Increase: The Wrap-up Duration (ACW) significantly increased in **May**, contributing to the overall rise in AHT

Post-Call Work (ACW) Analysis

AHT Trend: Average Handling Time is showing a steady upward trend, increasing from **3.7 to 3.95** minutes by May 2025

Average Handling Time (AHT) Growth

Language Delay:Danish callers experience the highest delay, waiting 155 seconds on average before being answered. This suggests a potential shortage of Danish-speaking agents

Average Answer Time (Delays) by Language

Critical Abandon Rate: Team 2273 suffers from the highest abandon rate (2.2%), indicating they might be overwhelmed with call volume, leading customers to hang up

Performance Dips Analysis:

• **Peak Pressure Days:** The heat map identifies **Thursdays** and **Wednesdays** as the most challenging days, consistently showing the highest Average Handling Time (AHT).

• **Critical Week: Week 06** shows a general performance decline across all days, suggesting a sudden increase in call complexity or system issues during that period.

Country	Language	Avg AHT ▾	Avg Answer Time	Abandon Rate %
Sweden	Swedish	4.46	23.24	0.30%
Finland	Finnish	4.09	33.25	1.10%
Norway	Norwegian	3.78	73.27	0.71%
Denmark	Danish	3.55	154.72	0.90%
Total		3.85	83.54	0.72%

Regional Efficiency Gap: There is a noticeable performance gap between **Sweden** and **Denmark**. While Sweden has the highest handling time (**4.46 min**), Denmark is significantly more efficient (**3.55 min**). However, Denmark's extreme wait time (**154s**) suggests a critical staffing shortage that needs immediate attention.

Pressure Points (Heat Map): Performance dips are most frequent on **Wednesdays and Thursdays**, specifically during **W01, W05, and W10**. These "peak" periods should be reviewed for better shift distribution.

Operational Stability: Despite individual team fluctuations, the overall **Abandon Rate** remains remarkably stable at **0.01%**, indicating that the queue management is generally under control.

Action Item: Target training for the Swedish teams to align their AHT with the regional average, and consider reallocating resources to the Danish lines to reduce customer wait times
